

Migrate with precision. Every record accounted for.

Frontier to Workday Payroll Data Migration

Migrating payroll data from Frontier (Chris21 / iChris) to Workday is high-stakes work.

Employee records, pay histories, leave balances, superannuation, and tax details all need to arrive accurately, completely, and in the right format. Get it wrong and payroll fails on day one. Mivada's AI-powered accelerator automates the heavy lifting while keeping experienced payroll specialists in control of every decision.

800+ fields, mapped automatically

Legacy payroll systems store data in structures that don't match Workday. Our accelerator uses AI to map source fields to Workday targets automatically, then presents every mapping to a specialist for review before anything moves.

Load, test, fix, repeat

Instead of a single high-risk data load at go-live, the accelerator runs repeated test loads into a Workday sandbox. Each cycle validates accuracy, catches errors early, and builds confidence before production.

Every record reconciled

Built-in reconciliation compares what was intended against what actually loaded. Every record is traceable from source to target, giving your payroll team and auditors full confidence in the migration.

01 AUTOMATED DATA MAPPING

Intelligent Field Mapping

- AI analyses your Chris21 data structures and maps each field to the correct Workday target, covering employee records, pay components, leave balances, and tax details
- Every mapping decision is reviewed and approved by a Mivada payroll specialist before data is transformed — AI speed with human judgment

02 DATA LOADING & TEST CYCLES

Iterative Validation

- Automatic generation of Workday EIB (Enterprise Interface Builder) templates and data load files, formatted to Workday's standards and ready to import
- API-enabled loading into your Workday test environment — enabling repeated load-and-validate cycles without manual file handling

03 RECONCILIATION & AUDIT

Traceability You Can Prove

- Built-in controls compare intended data against actual loaded data at every stage, flagging discrepancies before they reach production
- Full end-to-end audit trail: extraction → transformation → validation → load → reconciliation — ready for internal review or external audit

THE APPROACH

- ✓ AI + human oversight — automation for speed, specialists for judgment
- ✓ Iterative test loads — load, validate, fix, reload until it's right
- ✓ Scalable across entities and pay groups
- ✓ Aligned to Workday loading standards

OUTCOME

- Faster, more reliable migrations
- Reduced manual effort and error
- Improved data quality and audit confidence
- Repeatable methodology for multi-entity rollouts

THE PROCESS

WHAT HAPPENS NEXT

- **Discovery** — source system, data volumes, and entity structure mapped
- **Pilot** — sample data set mapped and validated in Workday test tenant
- **Full migration** — iterative load cycles with reconciliation and sign-off

WHO IS MIVADA

Australia's specialist Workday implementation partner.

We deploy HCM, Payroll, and Financials for mid-market and enterprise organisations — with deep payroll expertise built from years of migrating complex Australian pay environments.

100%

Workday focused

AU/NZ

Payroll specialists

AI-first

Delivery approach

Let's start with certainty.

Reconcile every dollar. Validate every file.

Frontier & Workday Payroll Test Lifecycle

Payroll testing is where migrations succeed or fail.

Traditional testing is manual, incomplete, and slow — leaving gaps in coverage that only surface after go-live. Mivada's AI-powered test accelerator covers the full lifecycle from test strategy through parallel run, validating every pay component, every compliance file, and every dollar — to cent-level accuracy.

Complete coverage, not sample testing

AI generates a comprehensive test library covering every payroll scenario: tax calculations, superannuation, allowances, retrospective adjustments, leave accruals, and full employee lifecycle from hire to termination.

Cent-level reconciliation

The accelerator compares source system payroll against Workday output at every level — employee, pay component, pay period, year-to-date, and leave balances. Discrepancies are identified, classified, and explained automatically.

Every compliance file checked

Payslips, ABA bank files, SAFF superannuation lodgements, Single Touch Payroll, and General Ledger postings are all validated line by line — before they reach your employees, the ATO, or your auditors.

01 TEST DESIGN & COVERAGE

AI-Generated Test Strategy

- Intelligent test case library covering payroll, absence management, and employee lifecycle scenarios — aligned to your Modern Awards and enterprise agreements
- Risk-based coverage assurance so nothing is missed: edge cases, retrospective calculations, and multi-award complexity

02 CONFIGURATION & ACCEPTANCE TESTING

Automated Validation

- Validates your Workday payroll and absence configuration against award rules and business requirements, detecting gaps between design and setup
- Auto-generated test scripts with expected results, guiding your business users through structured acceptance testing

03 PARALLEL RUN & FILE VALIDATION

Prove Accuracy Before Go-Live

- Side-by-side comparison of your legacy payroll against Workday at employee, pay component, pay period, year-to-date, and leave balance level
- Validates all compliance outputs: payslips (line by line), payroll results extracts, ABA bank files, SAFF superannuation lodgements, Single Touch Payroll, and General Ledger
- AI root cause analysis classifies every discrepancy — data issues, configuration gaps, rule interpretation differences, and integration errors — and recommends fixes with confidence scoring

END-TO-END SCOPE

- ✓ Test strategy and planning
- ✓ Configuration validation (payroll and absence)
- ✓ Acceptance testing execution
- ✓ Employee lifecycle testing (hire to retire)
- ✓ Parallel run and reconciliation
- ✓ Compliance file validation
- ✓ Root cause analysis and remediation
- ✓ Repeatable, auditable test cycles

BUSINESS VALUE

- **50–70% reduction** in testing effort
- Cent-level reconciliation accuracy
- Full compliance assurance (banking, super, STP, GL)
- Reduced reliance on specialist resources
- Faster, lower-risk go-live
- Reusable test cases and rule assets

TEST LIFECYCLE

WHAT HAPPENS NEXT

- **Strategy** — define test scenarios aligned to your awards and policies
- **Pilot** — validate a sample pay run end-to-end in Workday
- **Parallel run** — full reconciliation before go-live sign-off

WHY MIVADA

Payroll has no margin for error. Neither do we.

Workday configuration expertise combined with AI engineering — purpose-built to reduce risk and compress timelines.

50–70%

Less testing effort

Cent-level

Reconciliation

Audit-ready

From day one

Let's start with certainty.
